SUPPLEMENT TO  
25X1X REPORT NO.

REFERENCE COPY

DO NOT CIRCULATE

The North Koreans, with assistance from Soviet technicians, have installed a radar station on Chiaotao (板島) (probably Ch'ō-do 124-50, 38-32), which is an island about 10 kilometers long and 5 kilometers wide some 30 kilometers south of the Taedong River mouth in North Korea. This radar station has been constructed on a mountain slope in the southwest part of the island, about 500 meters above sea level, and covers the sea towards the east, south and west. Two caves, each about 4 meters wide and 6 meters long, have been dug into the mountains just below the radar station; one is used as a warehouse and the other serves as dormitory and office for the radar station personnel there. This radar station is completely equipped with communications facilities and its nearest contact point (sic) is the Communist coastal defense units stationed at Haili (海里) (? Haeni), west of the Taedong River mouth.
